As one of the world's largest and most diversified testing services providers, ALS has sites strategically located around the world to provide accurate and timely services. We have operations in more than 350 locations, in 55 countries, and on six continents. We have teams of experts around the world available to provide specialised business solutions that align with client needs. Major hub laboratories are located in Australia, Asia, North America, South America, Europe, the Middle East and Africa.

ALS Life Sciences in Europe employs over 1300 professional laboratory and support personnel represented in 13 countries at 31 locations. The European network consists of modern, analytical, ISO 17025 accredited laboratories and national service centres. Main laboratories are located in the Czech Republic, Sweden, Portugal, United Kingdom & Ireland, Turkey and Denmark. National service centres and smaller laboratories are located in Norway, Finland, Poland, Slovakia, Romania and Spain.

While varying in size and capabilities, the network performs an extensive range of physical, chemical, microbiological, biological, radiological and ecotoxicological analysis to meet the needs of local and regional clients.

Inter-office support and courier arrangements facilitate timely access to the full range of services and on-time delivery of results.

ALS Life Sciences Europe has also a number of centres of excellence dedicated to specialty services and industrial applications. These laboratories utilise the latest high-resolution technology in order to meet very stringent demands from clients worldwide:

ALS operates the best equipped laboratory globally for determination of metals (elements). Examples of analyses include chemical composition, impurities, and stable as well as radiogenic isotopes.

ALS carries out analyses of ultra-trace level organic compounds (dioxins, PCBs, PBDE and other flame retardants) and runs radiochemical testing.

Both laboratories have vast experience from matrices including environmental, food, and pharmaceuticals in addition to clinical, specialized industrial and research applications.

These analyses are performed in custom facilities using state-of-the-art analytical instrumentation by teams with more than 20 years of expertise in the field.

Analytical Services

This catalogue does represent a mere fragment of the full range of parameters, matrices, LOQ and other analytical capabilities, which ALS can provide. Contact your local sales representative to discover more and get the parameters you really need, with the associated quote, logistics services and reporting features.

ALS Quick

Many projects and manufacturing processes require quick information. The most common reason is to take quick decisions.

The reliability of laboratory results and the possibility to use express services for results delivery when needed, is a key factor for choosing a laboratory.

By using the express service **ALS Quick**, the possibility to deliver results for routine parameters in 1 to 3 days from the receipt of samples in the laboratory is a reality for all our clients. For a defined list of parameters, we are able to propose to our clients delivery of results on the same day as the samples were received in the laboratory. All the data are routinely available just after the quality validation on our on-line portal – Webtrieve.

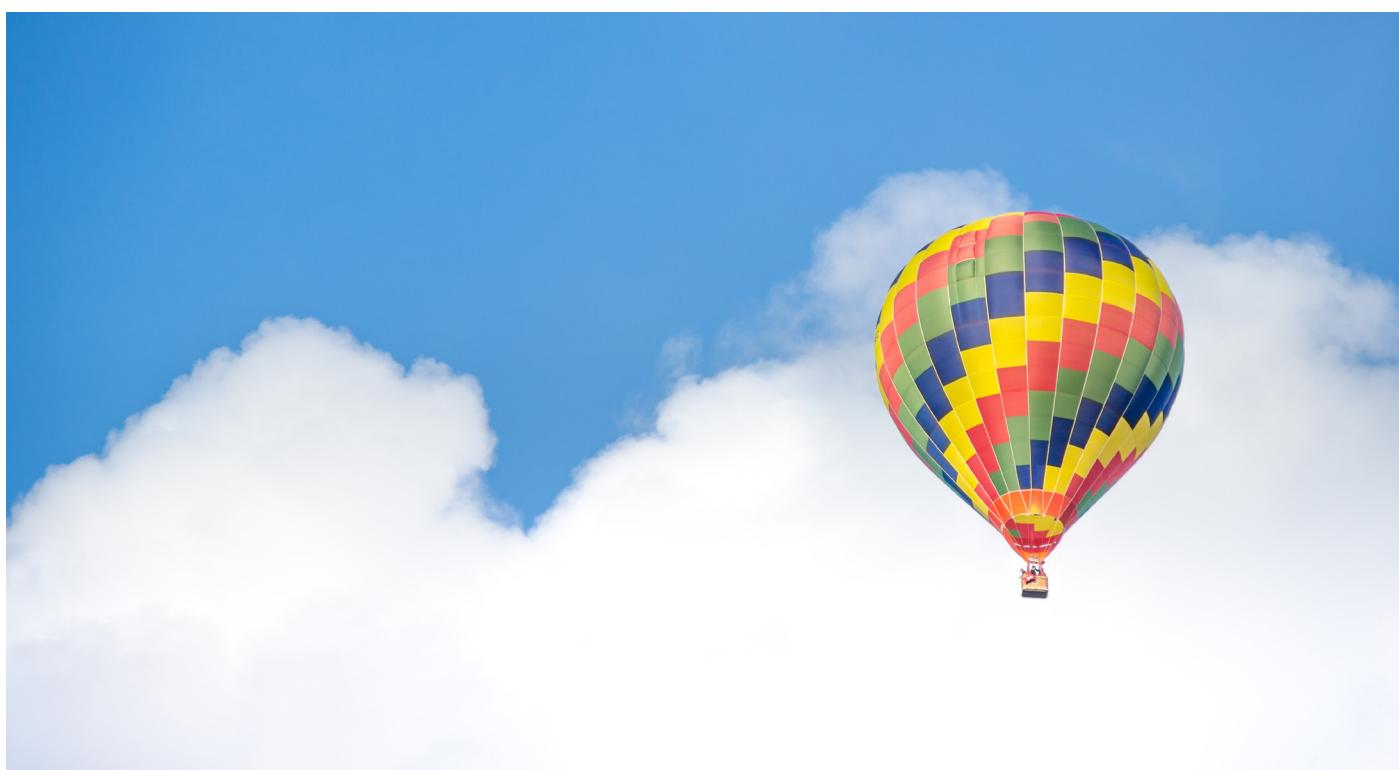

Samples for **ALS Quick** service and the same-day report of results should be delivered by a specific time to our laboratory. For any information related to the express services, please contact your sales representative.

LOQ

Limits of quantification (LOQ) mentioned in this catalogue are orientative only. They may vary depending on sample composition or may differ based on new technological considerations. Contact your local sales representative for a quote with actual LOQ.

Enjoy our product catalogue and feel free to contact us to let us provide you with the Right solutions!

AMBIENT AIR

Inorganic parameters

Sulphur dioxide in absorption solution

Parameter	LOQ (mg/sample)	Minimum sample amount
sulphur dioxide (SO_2) by IC - absorption solution	0.02 mg/sample	plastic, glass, 50 ml

Sulphur dioxide from Radiello® sampling tube

Parameter	LOQ (unit)	Parameter	LOQ (unit)
sulphur dioxide (SO_2) by IC	349 ng/sample	exposition time	(15 min)
sulphur dioxide (SO_2) by IC	0.29 $\mu\text{g}/\text{m}^3$	temperature precision	0.1 °C
sulphur dioxide (SO_2) by IC	0.7 ppbV		

Note: Mentioned LOQs are valid for a 7 days sampling period and a temperature of 25°C.

Nitrogen dioxide from Radiello® tube

Parameter	LOQ (unit)	Parameter	LOQ (unit)
nitrogen dioxide (NO_2) by IC	1300 ng/sample	exposition time	(15 min)
nitrogen dioxide (NO_2) by IC	1.71 $\mu\text{g}/\text{m}^3$	temperature precision	0.1 °C
nitrogen dioxide (NO_2) by IC	0.91 ppbV		

Note: Mentioned LOQs are valid for a 7 days sampling period and a temperature of 25°C.

Inorganic acids

Parameter	LOQ (mg/m^3)
hydrofluoric acid; hydrogen fluoride	0.048
hydrochloric acid; hydrogen chloride	0.061
phosphoric acid; ortho-phosphoric acid;	0.44
meta-phosphoric acid	
hydrobromic acid; hydrogen bromide	0.03
nitric acid; aqua fortis	0.037
sulfuric acid; oil of vitriol	0.039

Minimum sample amount: cartridge representing one ambient air sampling

Method: NIOSH 7903 (ion chromatography)

Alpha quartz

Parameter	LOQ ($\mu\text{g}/\text{filter}$)
SiO_2 - respirable quartz	5

Minimum sample amount: filter representing one ambient air sampling

Method: NIOSH 7602 (FTIR)

Asbestos

Parameter
fiber counting in filter samples by polarization microscopy (PLM) with phase contrast
asbestos in air by Scanning electron microscopy (SEM)
asbestos in dust by Scanning electron microscopy (SEM)

For sampling guidance, please contact your local sales representative.

Mercury

Parameter	LOQ (mg/sample)	Minimum sample amount
mercury - quartz filter or external amalgator	0.05	filter or external amalgator representing one ambient air sampling
mercury from atmospherical precipitation	2.5	glass, 50 ml

Method: AAS-AMA

Hexavalent chromium - Cr (VI)

Parameter	LOQ (µg/sample)	Minimum sample amount
chromium (VI) - leach of filter	0.1	filter representing 1 ambient air sampling

Method: ion chromatography

*Radiello is a patented diffusive sampler.

Polycyclic aromatic hydrocarbons (PAH) by HPLC

Parameter	LOQ (ng/sample)	Parameter	LOQ (ng/sample)
benzo(a)pyrene	70	benzo(k)fluorantene	70
benzo(a)antracene	70	indeno(1,2,3-cd)pyrene	70
benzo(b)fluorantene	70	dibenzo(a,h)anthracene	70

Minimum sample amount: components (sorbent PUF, filter) representing one ambient air sampling
Method: HPLC/UV-FLD

Polycyclic aromatic hydrocarbons (PAH) by GC-HRMS

Parameter	LOQ (ng/sample)	Parameter	LOQ (ng/sample)
benzo(a)pyrene	10	benzo(k)fluorantene	20
benzo(a)anthracene	20	indeno(1,2,3-cd)pyrene	20
benzo(b)fluorantene	20	dibenzo(a,h)anthracene	20
benzo(j)fluorantene	20		

Minimum sample amount: components (sorbent PUF, filter) representing one ambient air sampling
Method: HRGC-HRMS
Note: With a 100 m³ air sampling, LOQ for benzo(a)pyrene is 0.1 ng/m³ and 0.2 ng/m³ for the other compounds.

Polychlorinated dibenzo-p-dioxins and dibenzofurans (PCDD/F)

1,2,3,4,6,7,8-HpCDD	1,2,3,6,7,8-HxCDF	I-TEQ	penta-CDF	

Minimum sample amount: components (sorbent PUF, filter) representing one ambient air sampling, minimum 100 m³, optimum 325 m³ (recommended by EPA TO-9A)
Method: US EPA TO-9A (HRGC-HRMS)
Note:

- LOQ for I-TEQ is 0.2 pg 2,3,7,8-TCDD/m³ (sampling of 100 m³), results can be expressed in toxicity equivalent according to WHO
- Calculation parameter TEQ is mentioned at the levels of „lowerbound“ and „upperbound“.

Glass cartridge with PUF	PAH, PCDD/F, PCBs in emission
Glass cartridge with PUF	PAH, PCDD/F, PCBs in air samples
TECORA glass cartridge with PUF	PAH, PCDD/F, PCBs in emission
TECORA glass cartridge with XAD-2	PAH, PCDD/F, PCBs in emission
Glass cartridge with XAD-2	PAH, PCDD/F, PCBs in emission
Multibed tube for air sampling	VOC sampling
Tube Tenax TA for air sampling	VOC sampling

Ready to use cartridges

Parameter	Use
Glass cartridge with PUF	SVOC sampling
Tube SKC 226-30-04 with XAD-2	PAH for air sampling
Tube SKC 226-01	VOC for air sampling
Tube SKC 226-09	VOC, Dimethyl sulfid for air sampling
Cartridge filter	Methanethiol in work environment

Preparation of sorption modules and sorbents

Parameter	Use
Cartridge Adsorbent Radiello (RAD166)	NO ₂ , SO ₂ sampling
Blue Diffusive Body Radiello (RAD1201)	NO ₂ , SO ₂ sampling
Cartridge Adsorbent Radiello (RAD130)	VOC sampling
White Diffusive Body Radiello (RAD120)	VOC sampling
Outdoor Shelter Radiello (RAD196)	Supporting material
Triangular Support Plate Radiello (RAD121)	Supporting material

Preparation of absorption solutions

Parameter	Use
Ag ₂ SO ₄ in 5% KHSO ₄	H ₂ S sampling
demineralized water - ultrapure water UPW	cleaning
H ₂ O ₂ (not stabilized)	SOx sampling
H ₂ SO ₄	NH ₃ sampling
HNO ₃ + H ₂ O ₂	metals sampling
4% K ₂ Cr ₂ O ₇ + 20% HNO ₃	mercury (Hg) sampling
NaOH	hexavalent chromium(CR(VI)) sampling
NaOH	HF, HCN sampling
chromic acid	cleaning of absorption solution containers
Na ₂ CO ₃	phenols sampling
methoxyethanol	PCDD/F, PCB, PAH sampling

Preparation of filters

Parameter	Use
filter (PVC/acryl pocomolymer, 47 mm, 3 µm- PALL)	Cr(VI) sampling
PTFE filter (250x200 mm)	High volume sampling system
PTFE filter (47 mm)	Low volume sampling system

Radiello® sampling kit

Parameter	Use
diffusive body Radiello (RAD120) – white	VOC sampling
diffusive body Radiello (RAD120-1) – blue - NO ₂ , SO ₂	NO ₂ , SO ₂ sampling
triangular supporting plate Radiello (RAD121)	close and support diffusive body
adsorbing cartridge Radiello (RAD130)	VOC sampling
adsorbing cartridge Radiello (RAD166)	NO ₂ , SO ₂ sampling
Outdoor shelter Radiello (RAD196)	protection against weather conditions

TO-15

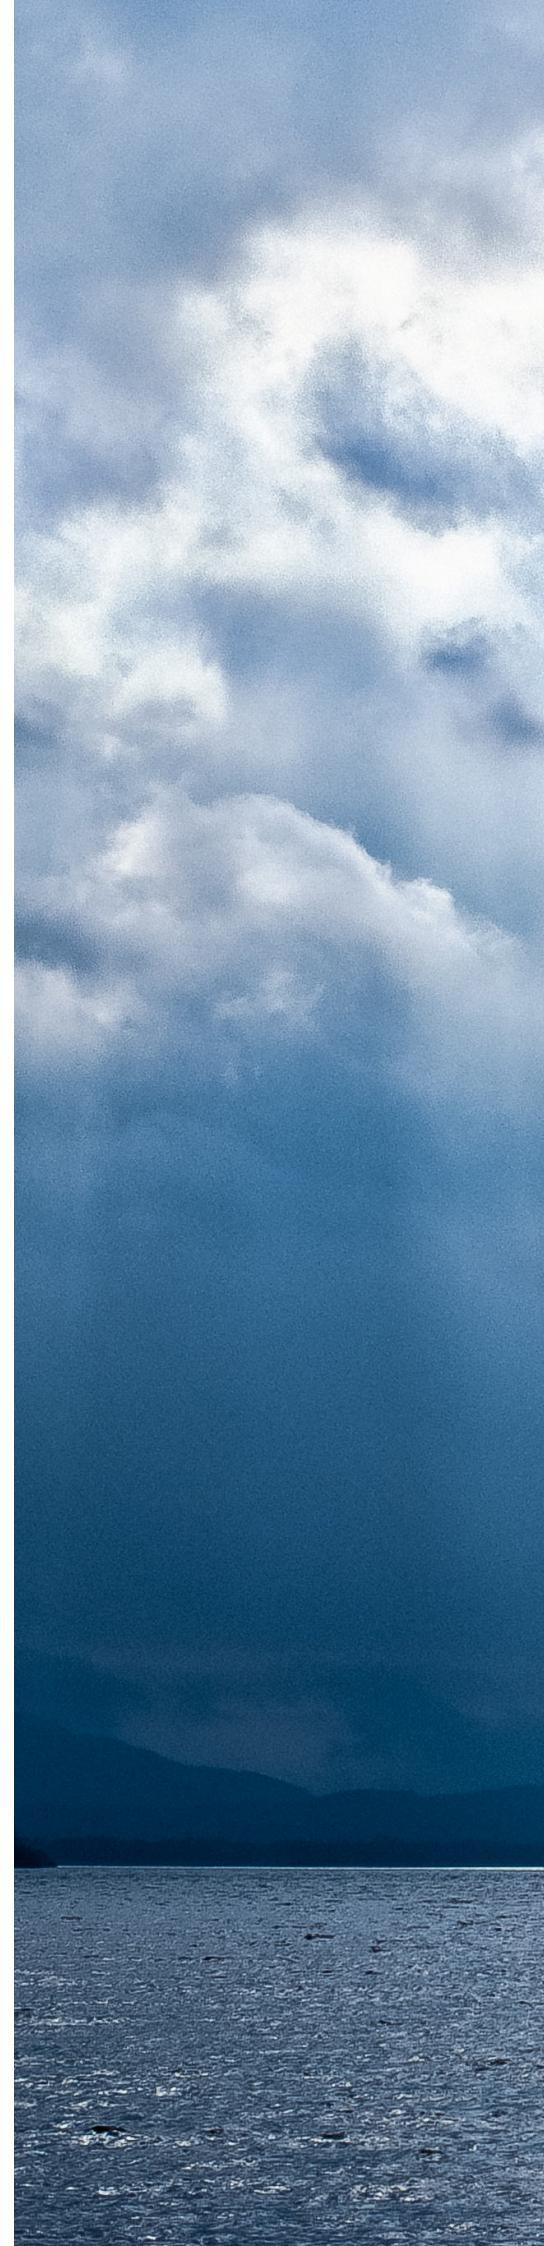

ALS laboratories are proud to offer a range of sampling options for gas sampling using Silonite® coated canisters based on USEPA TO-15 is accredited in accordance with ISO 17025.

The versatility of Silonite® coated canisters allows a broad range of sampling options, including: soil gas, sub-slab monitoring and ambient air monitoring with Time Weighted Averages (TWA's). Silonite® coated canisters offer significant advantages when compared to traditional sampling media including:

- Simplicity of use on site.
- No sampling pumps are required and no need to record time of sampling.
- A whole gas sample is captured, meaning there is no need to choose the correct sample media before going to site.
- Multiple and repeat analyses can be undertaken from a single canister sample as only a portion is used at a time in the laboratory.
- Canisters have a fused silica lining called Silonite®, which provides an extremely inert receiving vessel to collect gas samples.
- The Silonite® coating aids sampling of more reactive compounds which are difficult to capture on other media.
- Holding times for canister samples are 28 days – far in excess of other whole gas methods.

Analyses available includes:

- **VOCs Trace** gases target list (based on USEPA TO-15) with or without Tentatively Identified Compounds (TICs)
- **TPH Aliphatic split** (>C4-C6, >C6-C8, >C8-C10,>C10-C12) and Aromatic split (>C6-C8, >C8-C10, >C10-C12)
- **Bulk Gas Screen** (Hydrogen, Oxygen, Nitrogen, Carbon monoxide, Methane, & Carbon dioxide)
- **Helium** available as confirmation of sample integrity when helium has been used on site as a tracer. Helium is available as additional analysis when ordering TPH and/or VOC
